P3 · Dataset as a product

Due Friday 6 November, 23:59 · by email · in pairs

Package the dataset and the pipeline so that another pair could verify your inputs, reproduce your result, and see where it stops being reliable.

> **Not marked.** P3 is required and you get written feedback, but it carries no grade. It is the last checkpoint before the portfolio.

What to send

- ☐ A datasheet, using the areas below, with unresolved facts marked unresolved.
- ☐ A schema, or an explicit contract for shape and data type.
- ☐ A quality-assurance report: missing values, ranges, duplicates, corrupt files.
- ☐ An independent manifest: relative paths, byte sizes and SHA-256 digests.
- ☐ One entry point that runs the small test pipeline from input to output.
- ☐ The environment, dependencies, configuration, seed and concise logs.
- ☐ Timing and memory evidence for one storage or implementation choice.
- ☐ Failure handling for a missing input, a digest mismatch, an invalid shape and an interrupted run.
- ☐ Known limitations, who maintains it, who did what, and the generative-AI declaration.

The datasheet

Answer each area with evidence and a source. Where the source does not answer, write “unknown”. Do not infer a missing fact.

Area	Cover
Identity and purpose	Title, version, owner · intended and out-of-scope uses · unit of observation
Collection and sampling	Who or what is represented · when and how · sampling frame, exclusions, known gaps
Labels and transformations	Who produced any labels · cleaning, filtering, resampling, derived fields · was the original kept
Rights and privacy	Licence and attribution · personal or sensitive data · access, retention, deletion
Quality and integrity	Units and valid ranges · how missing values appear · duplicates · manifest and hash checks
Use and maintenance	Versioning · named maintainer · your decision: use, use with controls, investigate, or do not use

A typed name in a “reviewed by” field records responsibility. It is not a digital signature.

How to send it

To	steven.lemoan@ntnu.no, with your partner copied in
Subject	IDIG4120 P3 — Surname and Surname
Attach	One PDF, and the notebook or repository.
Size	Under 10 MB. Send anything larger as a link.
By	Friday 6 November, 23:59 Norwegian time

What comes back

Feedback on the datasheet, quality assurance, manifest verification, reproducibility, and performance and failure handling. Each item is marked needs revision, meets the checkpoint, or strong evidence. If you are going to miss the deadline, tell me before it and send what you have.

Next: the portfolio, due Monday 9 November — three days later. Draft its introduction and summary now, not over that weekend.
